

Workforce Re-Occupancy

In preparation for a return workforce re-occupancy, Gallagher Bassett Technical Services is offering a vast array of services from a team of Certified Industrial Hygienists, Certified Safety Professionals, Professional Mechanical Engineers, Architects and disinfection and sterilization experts to apply state of the art technologies and best management practices to assist in the sanitizing of buildings and reduction of the risk of re-occurring viral infection and continued spread.

We anticipate this to be a transition back to normalcy. Based on our experiences in the direct response to the virus and the disinfection of multiple facilities, combined with personal precautions taken outside the workplace, we are here to help get your business, industry and facilities up and running again.

Services include:

Risk Assessments of Buildings/Workplaces (prior to re-occupancy)

- Assessment of facility health and quality after a prolonged shutdown by Certified Industrial Hygienists
- Identification of proper sanitation, disinfection or sterilization technologies
- Identification of modes of possible transmission and infection present during daily operations

Evaluation of HVAC/Mechanical Ventilation Systems

- Survey of design, operation and performance
- Implementation of ASHRAE-Recommended Infection Control Measures

Application of a Hierarchy of Health and Safety Actions, Projects and Controls

- General & detailed procedures to assist and mitigate in the reduction of risk of reinfection and possible spread
- Possible screening policies programs, real time technologies and techniques for worker and occupant screening and re-entry

Facility and Area(s) Architectural Re-configuration

- Worker and public traffic patterns and behavior modifications
- Area isolation and aesthetic barriers

Implementation of an Ongoing Operations and Management Program

- Training of in house facilities and maintenance staff
- Routine cleaning & disinfection protocols
- In place response action plans, if needed;
- and internal risk management documentation

Contingency & Emergency Response Plans

- Management & oversight of future cleaning/disinfection/sterilization actions
- Cleaning efficiency testing and verification
