

GB Construction Health & Safety Risk Management Solutions

Gallagher Bassett Technical Services (GBTS) specializes in risk management and loss control services with customized solutions for your construction business.

Prevention is key and we are experts at partnering with you to assist with workplace safety, mitigation, reduction of potential liability claims, and compliance with state and federal regulatory laws.

Key components of the GBTS Health & Safety Risk Management Solution include:

- Oversight, implementation and revision of health & safety protocols and policies
- On-site and web-based training for workers and supervisors
- A certified individual (EMT, First Responder, Safety Professional) on-site to oversee and administer your Health & Safety Program

Another key component we offer is the implementation of our exclusive smartphone-based app. This exclusive app tests for user impairment, not for specific substances such as alcohol or drugs, and has been tested and calibrated for accuracy at Johns Hopkins University and is supported by the National Institute of Health. The app is iOS and Android compatible, easy-to-use, and provides objective-results based on scientific measurements.

The app is designed to take several hundred measurements of key neurophysiological indicators while performing divided-attention tasks. It is intended to measure things like:

Reaction time

Hand-eye coordination

Decision-making

Time estimation

Balance

Data received in the app is used to calculate an impairment score your company can use, along with other relevant data to make decisions regarding impairment of workers. The app does not provide any health or medical advice and its use is meant for informational purposes only.

What does this mean for your company? A robust Health & Safety Risk Management Program that can assist with:

- Fostering increased safety awareness
- Reducing claims
- Complying with regulations and laws
- Enhancing cognitive impairment recognition
